Quality Electrical Service Provider

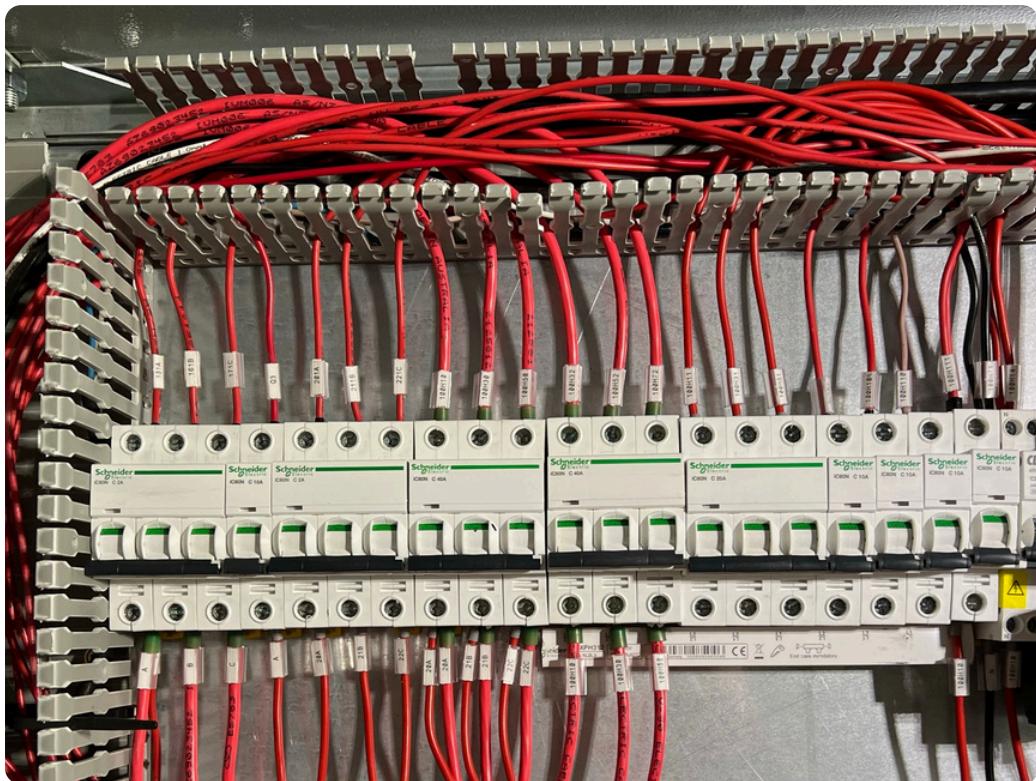

What we offer

At Phoenix Energy Company, we specialize in delivering end-to-end project solutions with a focus on design excellence, quality, and seamless execution. Our expertise spans comprehensive project planning, budgeting, and management to ensure timely and successful project delivery.

We take pride in engaging skilled trades and coordinating every aspect of construction to achieve smooth project completion and handover. Our approach is grounded in transparent communication, positive client engagement, and unwavering accountability, ensuring an exceptional customer experience from start to finish.

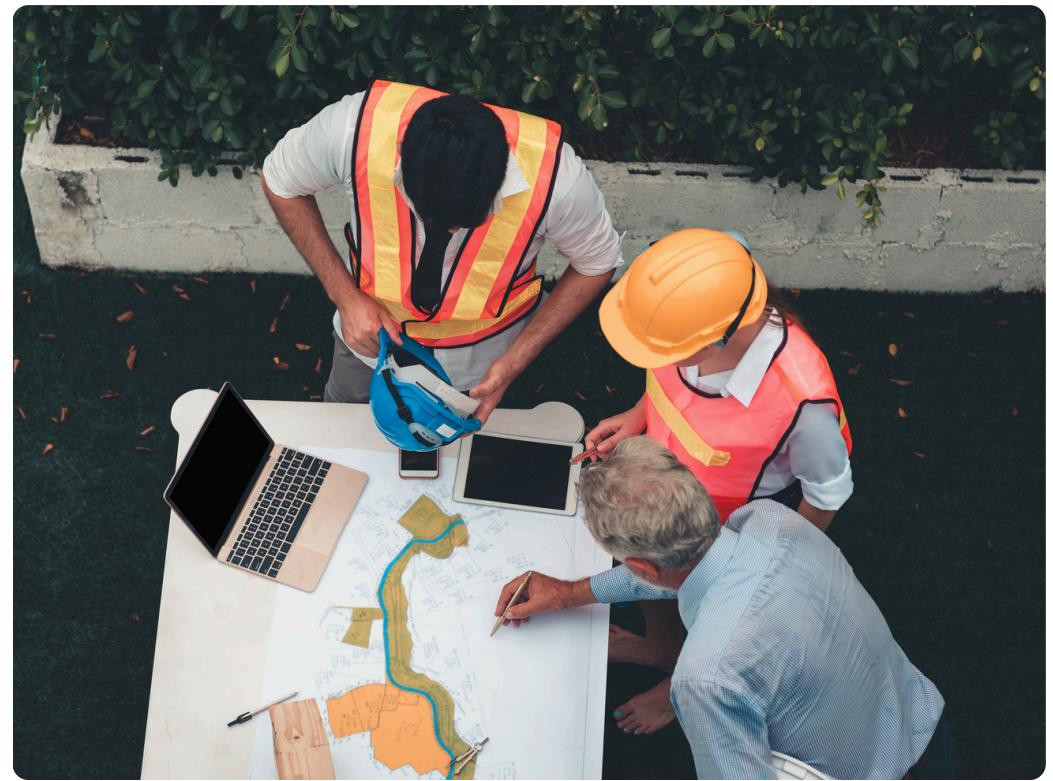

Phoenix Energy Company also provides robust business management services, including warranty support, meticulous documentation, and efficient time management, ensuring long-term satisfaction and reliability for every project we undertake.

Who Are We

Phoenix Energy has developed a reputation for quality workmanship and positive client engagement. Our team of highly skilled and experienced professionals specialize in designing, installing, and maintaining electrical systems for a diverse range of clients. With a strong commitment to quality and innovation, we provide comprehensive electrical solutions tailored to the specific needs of our clients. Our services range from large-scale electrical installations and maintenance to energy solutions and consultations. We are particularly focused on large scale projects and specialize in the design and construction of these sites from their inception through to their delivery and ongoing preventative maintenance. Our commitment to quality and sustainability makes us a trusted choice for clients seeking efficient and reliable energy solutions.

We are proud that we were able to achieve constant growth with our continuous hard work and commitment. We were happy to achieve the recognition as Finalist in Australian Trades Small Business Champion Awards in the Electrical Large category in 2023 and won the title as Winner of Australian Trades Small Business Champion Awards 2024.

Our Vision

Phoenix Energy's vision has consistently been centered around expansion, while upholding our commitment to superior workmanship and excellent customer relationships. Phoenix's growth will be driven by the development of the businesses capabilities through pursuing challenging projects and positive staff engagement. Our leadership team, comprised of youthful directors, is perpetually driven by a desire for further growth and success of our team and business.

Our Clients

We have been operating for 3 years now and have seen enormous growth throughout this time. We have projects on the go in QLD, NSW, WA and SA ranging from \$10 - \$1.6M dollars. We prioritize quality across every aspect of our business. We foster quality relationships with our clients and suppliers to achieve outstanding electrical workmanship, on-time and on-budget.

Our projects

Phoenix Energy takes particular pride in a few standout projects we have successfully delivered since our inception. A couple of our recent commercial builds are provided below.

We prioritize quality
across every aspect of our
business

Dalby Police Station renovation

The comprehensive renovation of the Dalby Police Station. Which saw a total renovation of the existing premises with the addition of an extended watch house and built over carpark with space for offices, conference rooms, staff amenities, and a brand new state of the art laboratory. Our responsibilities were the installation of all electrical equipment associated with the mechanical aspect of the project. With several air-conditioning units, exhaust air system and the installation and fit off of two control panels.

Goondiwindi Hospital refurbishment works

The recent refurbishment works carried out at the Goondiwindi Hospital during 2023, saw Phoenix's involvement in sections throughout the project. This involvement included the connection and disconnection of the Q-Bital temporary theatre, which involved the coordination of facility staff for whole site shutdowns for integration and disconnection of submains into the MSB and installation of optic fiber cable and connections to integrate temporary theatre into DDHHS communications network.

Martin Energy Group Various Biogas Facilities

Phoenix Energy specializes in biogas generation plants across Australia and facilitates not only the installation of these plants but the on going preventative maintenance that is necessary due to their volatile environment. Due to our heavy involvement in the Piggery industry we have naturally been involved in the rise of biogas generation in this sector and has seen us overcome the many hurdles that are involved to become one of Martin Energy Group's preferred electrical contractors for their Australian sector. We manage 5 Biogas plants in southern Queensland alone and completed the installation of a greenfield site in Western Australia last year. We are also in the preliminary stages of our next new site North of Goondiwindi with a hope to complete this in 2024.

Kotzur 22,500T Fully Automated System

In Mid 2022, Phoenix Energy was engaged to facilitate the complete installation of a fully autonomous grain storage facility on Dooruna in central Queensland. This facility had the capacity to store 22,500 tons of grain across 14 gas sealed silos with a pit and outload garner bin, 3x elevators, a central distributor head, 9x top drags, high level probes, aeration, a dedicated grain drying system and a grain cleaning system. The facility is controlled through a central programmable logic controller (PLC) which allows the user to select the grains path with just the click of a button on a central touch screen. An automatic aeration system was integrated, taking in outside humidity, temperature and individual run times to ensure every silo's different grain type has the optimum airflow during its time in storage.

Kaloma Aged Care Diesel Generator Upgrade

Phoenix Energy was tasked in 2021 to upgrade the backup diesel generator at the Kaloma aged care facility. This saw the disconnection of the building electrical equipment and removal of the housing, removal of the old generator which was replaced with a 350KVA Cummins powered Genelite generator with a DeepSea 7320 controller, upgraded submains cabling back to the MSB and re-connection of the housing.

Phoenix Energy worked closely with all staff and committee members to ensure there were no obstructions to their day to day business and clients. Shutdowns were clearly communicated and executed in a timely manner allowing us to successfully complete the project in a single outage.
